27 October 2023

The final lap: wrapping up PrepDSpace4Mobility

For the last 12 months, we have been working on unlocking the potential of European mobility data. Thanks to your active involvement, we were able to successfully lay out possible roadmaps for the future EMDS. But while much progress for data-driven mobility has been made, important details have yet to be defined. As we enter the home stretch of our project, join us in reflecting on our final event, the key insights of our analysis report, and a sneak peek into what lies ahead.

Final event recap

Strengthening Europe's data economy is a collective effort. On 29 September, we held our final event and revealed crucial insights on what a cross-sectoral approach to mobility data harmonisation and interoperability in Europe could look like. Rewatch the event to get the full picture of all of PrepDSpace4Mobility's activities and what to expect from the EMDS.

Analysis report in a nutshell

Interoperable, secure, and value-driven mobility data sharing can become a reality. Our report provides a detailed examination of the EMDS initiative and its requirements to fit the diverse needs of stakeholders involved. It covers foundational principles, technical developments, and business and governance models for a successful data space. Still, concerns about the clarity of the EMDS' value proposition for the different parties involved

clarity of the EMDS value proposition for the different parties involved remain. Future activities supporting the EMDS require strong policy guidance and planning stability. Read our full analysis report to get all the details on the future EMDS.

Looking ahead

The ultimate design of the EMDS is not yet finalised. We have laid the groundwork for a new era of mobility data sharing, that is supported by ongoing European data space projects, initiatives, and regulations. While PrepDSpace4Mobility comes to an end, the future of European mobility has just started. Looking ahead, it is time to test and demonstrate the power of data-based decision-making, empowering European city and regional planners. The **deployEMDS** project starting in November will make available large amounts of data in machine-readable format, improving traffic management, multimodal services and planning. 45 partners will demonstrate more than 20 use cases in nine cities and regions across Europe using one harmonised technical infrastructure. Join us in exploring the future of mobility data at deployEMDS Open Session at Tomorrow.Mobility **7 November 12:30 – 13:15 CET**.

Thank you

We want to express our special gratitude to all industry experts, data sharing pioneers and enthusiasts that have supported PrepDSpace4Mobility during the last months. Your contribution and active participation have been vital for our collective efforts to create more innovative, sustainable, and inclusive mobility solutions. Are you interested in staying informed about future activities regarding the EMDS? Please get in touch with us to stay in the loop.

Let's keep on working together to achieve data-driven mobility's full

potential.

Best,

The PrepDSpace4Mobiltiy Team
